

#### Hadron Verification Suite for the Cascade Energy Region

10 July 2005 V. N. Ivanchenko

# Verification of hadron-nucleus interactions

Neutron production by p, d,  $\alpha$  with E < 1 GeV ▶ P + A -> n + X ▶ d + A -> n + X  $\triangleright \alpha + A \rightarrow n + X$ 45 thin target experiments with reasonably small systematic Verification runs before the release

- Binary Cascade
- Binary Ion cascade
- Bertini Cascade
- Wilson-Abrasion model
- Control on differential spectra

The number of problems have been fixed for the Geant4 release 7.0

## **Deuteron Fragmentation**

 Data from EXFOR database
 Simulation – available G4 models

#### Neutron spectra by 256 MeV protons Binary and Bertini Cascades G4 7.0

#### Neutron spectra by protons below 1 GeV in Al and Fe Binary Cascade G4 7.0

The status of G4 7.0 for the cascade energy range

Binary Cascade is the most precise model for protons and light ions Bertini Cascade work well except for the light materials Wilson-Abrasion model is not good for light

Binary Cascade in Pb

CPU	Be	Al	Fe	Pb
Binary	3.0	5.9	9.7	30.2
Bertini	1.4	1.7	2.4	5.7

Genova, July 2005

ions

### HARP test

Is created for further utilisation of HARP results for verification of G4 models
 There are no official comparison with the data yet
 First HARP publication will be submitted in July

# Pion production by protons of 8.9 GeV/c and 12.9 GeV/c in Be and AI G4 7.0

#### QGSP and QGSC Pion and proton production by protons of 8.9 GeV/c in Be G4 7.0

QGSP G4 7.0 theta = (15 - 300)mrad, p = (0.2 - 10.0)GeV

QGSC G4 7.0 theta = (15 - 300)mrad, p = (0.2-10.0)GeV

Genova, July 2005

V.N. Ivanchenko

### **Conclusion remarks**

- Routine procedure for verification of hadron generators were extended to HARP energy region and to deuteron and alpha as a primary
- Binary Ion Cascade and Wilson-Abrasion generators are included in the procedure
- The complete run have been performed before the Geant4 release 7.0 and number of problems were identified and fixed
- For the energy below 1 GeV the Binary Cascade is the most precise generator, however some problems in evaporation persist
- The Bertini Cascade is reasonably good in the cascade energy region and is significantly faster than the Binary Cascade
- The Wilson-Abrasion model needs some improvements
- For 10 GeV proton beam the verification performed for the Binary, Bertini, QGSC, QGSP generators
- Some problems are observed in differential spectra of all generators
- Complete test have been performed before 7.1 results are the same, in general
