'God particle': New particle found, could be the Higgs boson, CERN scientists say

04 Jul 2012, 13:05

CERN scientists have discovered a new subatomic particle that could be elusive Higgs boson, which is believed to be crucial in formation of universe.

Foreword

This scientometric investigation does not have the character of a rigorous, quantitative statistical analysis due to the difficulty of retrieving data from mainstream media sources

Nevertheless, the results provide some
food for thought...

The few landmark cases we selected are intended to be
representative of the field

Selections and omissions are not a judgement of merit!

Data sources

- **Thomson-Reuters: ISI Web of Knowledge**

- CERN subscription: since 1970, conference database not included

- **CERN, Fermilab and SLAC press releases**

- Limited time coverage
- Limited search facilities

- **Newspaper web sites**

- Some have a search engine
- Search facilities are paying (e.g. FAZ) or with limited free access (e.g. NYT)
- Search engines are usually primitive

Inspired news

James Gillies, head of communication for CERN, admitted that the institute "very shamelessly" uses the collider to build a platform to promote particle physics and said they were always keen to make the most of Hollywood's interest. However he added that the organisation is careful to show how the Higgs story was part of a broader push for scientific discovery.

LHCb experiment observes new matter-antimatter difference

24 Apr 2013

Press Office

Geneva, 24 April 2013. The LHCb collaboration at CERN¹ today submitted a paper to *Physical Review Letters* on the first observation of matter-antimatter asymmetry in the decays of the particle known as the B^0_s . It is only the fourth subatomic particle known to exhibit such behaviour.

Materia e antimateria, un indizio per risolvere il grande mistero dell'universo

Physicists' Antimatter Recipe Is More Sci- Than Fi

By DENNIS OVERBYE

Published: September 19, 2002

Correction Appended

Physicists working in Europe announced yesterday that they had passed through nature's looking glass and had created atoms made of antimatter, or antiatoms, opening up the possibility of experiments in a realm once reserved for science fiction writers. Such experiments, theorists say, could test some of the basic tenets of modern physics and light the way to a deeper understanding of nature.

CERN and Caltech join forces to smash Internet speed record

15 Oct 2003

CERN¹ and California Institute of Technology (Caltech²) will tomorrow receive an award for transferring over a Terabyte of data across 7,000 km of network at 5.44 gigabits per second (Gbps), smashing the old record of 2.38 Gbps achieved in February between CERN in Geneva and Sunnyvale in California by a Caltech, CERN, Los Alamos National Laboratory and Stanford Linear Accelerator Center team.

Un download da record nasce l'Internet superveloce

I ricercatori: "Nel futuro, collegamenti da 10 gigabit al secondo"

di ALESSIO BALBI

IMMAGINATE di poter scaricare da Internet l'ultimo cd del vostro artista preferito in un secondo. Fantascienza? Assolutamente no. È il futuro di Internet. Domani, due scienziati del Cern e del California Institute of Technology (CalTech) saranno premiati per aver realizzato, con i rispettivi team, il più impressionante record di velocità della storia della Rete: la trasmissione di un terabyte di dati a 7 mila chilometri di distanza con una velocità media di 5,44 gigabit per secondo.

But the Europeans are racing ahead in developing faster optical networks. A CERN-Caltech team set an Internet 2 Land Speed Record recently by transferring 1.1 trillion bytes of data in less than 30 minutes.

Such transfer speeds were "not even thinkable a year ago," said Flavia Donno, the computer scientist in charge of physics experiments on the grid for CERN.

Let the number-crunching begin: the Worldwide LHC Computing Grid celebrates first data

Press Office

03 Oct 2008

Geneva, 3 October 2008. Today, three weeks after the first particle beams were injected into the Large Hadron Collider—the world's largest particle accelerator—the Worldwide LHC Computing Grid celebrates the start of its crucial data challenge: the analysis and management of more than 15 million Gigabytes of data every year, to be produced from the hundreds of millions of subatomic collisions expected inside the LHC every second. This data-handling feat marks an essential stage in the process of enabling researchers to discover new physics.

Putting your computer to work to fight against malaria in Africa

13 Jul 2006

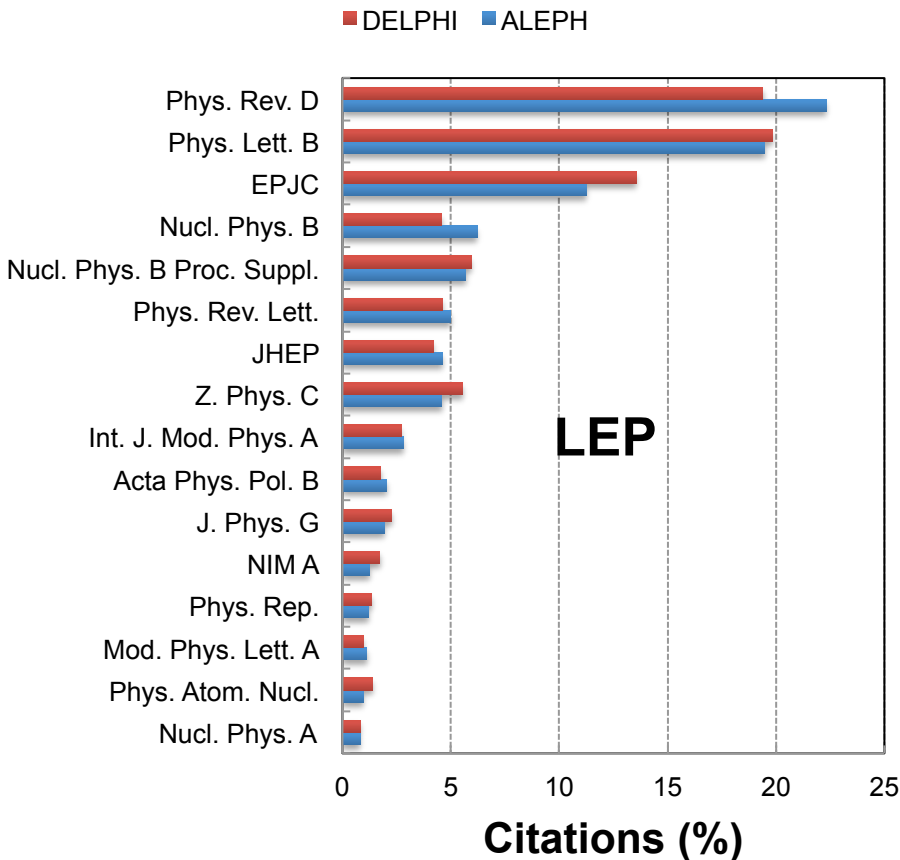

Geneva, 13 July 2006. While you are sending an email or surfing the web, your computer could be helping to tackle one of Africa's major humanitarian challenges, malaria. [Africa@home](#) , a project conceived and coordinated by CERN ¹, was launched publicly this week. It is recruiting volunteer computers in homes and offices to run a computer-intensive simulation program called MalariaControl.net ², developed by researchers at the Swiss Tropical Institute (STI) ³.

To install MalariaControl.net, volunteers just need to download the necessary software from the [Africa@home website](#) , which will do the scientific calculations in the background, while they are doing something else. The results are regularly returned to a server at the University of Geneva ⁴, so that the researchers can evaluate them.

Conclusions

"You have to shout to be heard when it comes to getting science into the media and people to listen," said Professor Lythgoe.
