

# Il sistema RTP 10.6

$$\epsilon_{\phi\phi} = \frac{1 - \bar{\nu}^2}{\bar{E}} \frac{R}{t} P$$

Laboratorio di ottica applicata  
DIFI

# Sensibilità tipiche

$$\left. \begin{array}{l} \bar{E} = 14 \times 10^9 \text{ Pa} \\ \bar{\nu} = 0.4 \\ R = 15 \text{ mm} \\ t = 2 \text{ mm} \end{array} \right\} \Rightarrow \frac{1}{\Phi} \frac{\Delta \Phi}{\Delta P} = -310 \text{ dB re } 1/\mu\text{Pa} \quad \Rightarrow +40 \text{ dB}$$

$$\text{Michelson (L = 50 m)} \Rightarrow \frac{\Delta \Phi}{\Delta P} = -133 \text{ dB re rad}/\mu\text{Pa} \approx 0.22 \mu\text{rad}/\mu\text{Pa}$$

Sea state zero  $\approx 100 \mu\text{Pa}/\text{Hz}^{1/2}$  @ 1kHz

Demodulation noise  $\approx 17 \mu\text{rad}/\text{Hz}^{1/2}$

# Prestazioni: schema riassuntivo

Parameter	Requirement	Measured value
Hydrophone responsivity	>-130 dB re rad/uPa	>-130 dB re rad/uPa
Hydrophone bandwidth Transfer function	5 - 2500Hz Flat ± 1dB	5 - 4000Hz Flat ± 1dB
Cross talk	< -30dB	-35dB
Directivity	± 1dB	± 1dB
Spectral dynamic range @3kHz		114 dB
Relative phase between hydrophones	±10°	±5°
Total system noise	< SS0	< SS0
Operational/ survival depth Operational/ survival temp	300m/ 500m -5°C to 35°C/ -20°C to 50°C	confirmed in laboratory tests confirmed in laboratory tests
